

Project 4: FTK Investigations

“Would you be interested in how we “work our magic” in here? If you’ve got a few minutes, I can demonstrate.”

“I’ll show you how we use a program called FTK Imager to create a forensic image of a computer. FTK provides one way of gathering information for our reports.”

“In cases like this, there are always so many questions that I usually need to use several different programs to process the images. I’ll try something called Registry Viewer next, and then maybe PRTK after that... I’m sure one of 'em will give you the answers you need!”
